PAUSE II

00:00:00

Puzzles so far:

Issue/Goal: The exit door is locked and has a wooden plank nailed on top.

Wooden Plank Puzzle: Light beams cast over the vent; if the player clicks on the vent, the cover disappears, revealing the hammer inside it, now able to be picked up and used on the nailed wooden plank.

Exit Key Puzzle: Show coin on desk and lit-up arcade machine. Once a player inserts a coin, they play a game, and when completed, they're given a key that pops up in front of them.

Next Steps:

Ava: Adding interactivity to remaining room puzzles

Hailey: Design puzzles and texture room/interactable objects for second & third room

Yvie: Environment design and collectible/model art

Benhi: Connect arcade mini-game to main scene to make it playable

Group: Upload draft game to Unity WebGL to practice build process and let others playtest

CONCEPT:

Genre: 3D point and click horror escape room

Summary: You've clipped into a bizarre liminal space reality where nothing makes sense. Find items through the disjunctive rooms to help with your escape.

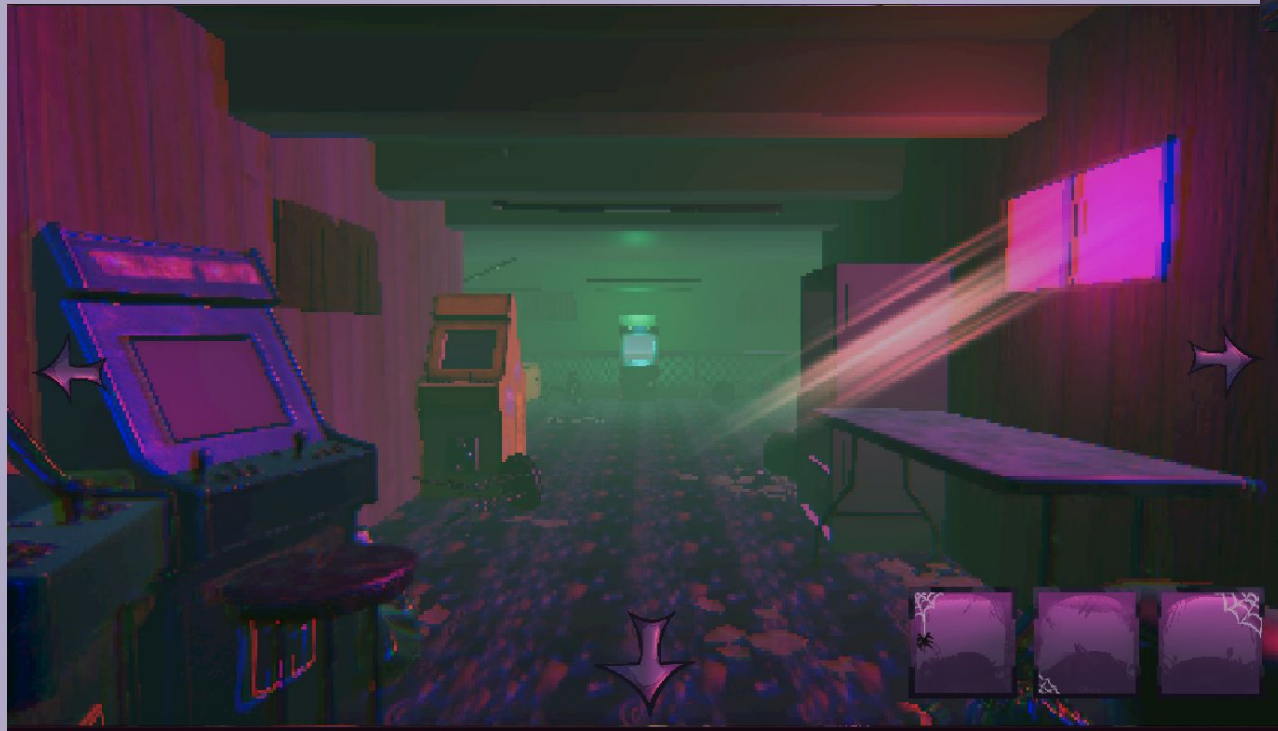

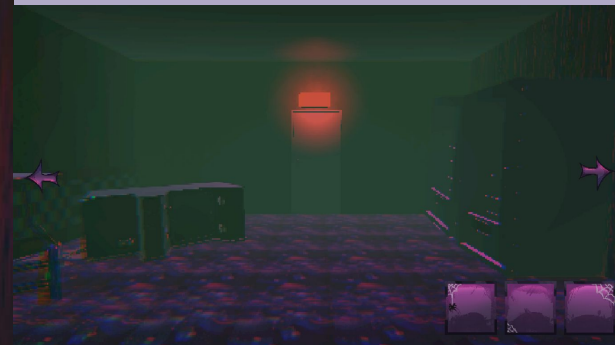

Unique selling point: Pixel filter and atmospheric lighting. Focusing on a unique scene setup with uncanny valley and liminal spaces aspects.

Platform and input: PC and point-and-click movement with preset camera points. The player will interact with UI elements on the screen for all interactions.

Audience: Teens and Adults

MVP

Video Link: <https://youtu.be/ddGZnrEyqHE>

MVP GAME LOOP:

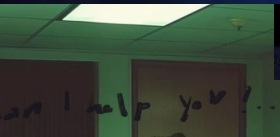

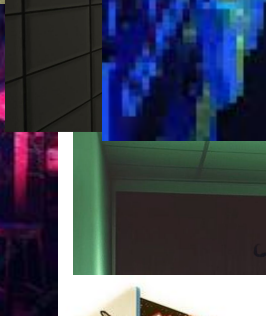

Overall game mechanics: The player starts in an abandoned arcade room with the ability to click arrows to move left and right. Look and click around the scene to collect objects sent to your inventory slot, where you can drag them onto scene objects to interact with them and do puzzles.

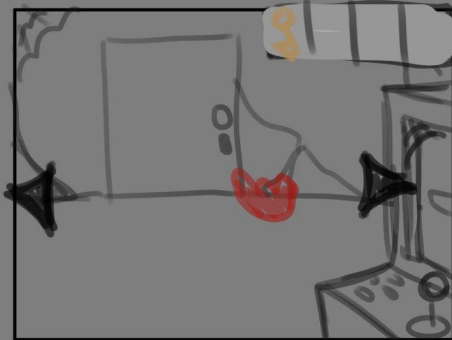

Game loop:

- Player finds coin hidden around the room (possibly randomized between 5-7 locations)
- Put coin into coin slot in arcade game
- Play a small minigame to get the key
- Exit the room with the key
- WIN SCENE: Player is transported to/fades into a bedroom scene with an alarm going off and an option to return to menu

MOOD BOARD:

ASSET LIST:

Most Environmental Assets, Creatures, and Collectible Objects will be custom made, only few base 3D assets will be found and painted over/retextured to fit our theme and style

What assets we'll need to **find**:

- Base 3D assets
- Arcade machine
- Chairs
- Trash/rubble
- Claw/vending machine
- signs

Assets we need to **create**.

- Collectibles (Coins, Keys, scraps of paper)
 - 3D model and 2d art for inventory/cursor image
- Monster (benadryl Hat man)+Speech bubble
- Inventory UI
- Arrow/Navigation UI
- Title screen
- End/Win screen
